

Computer Science Portfolio Essay

Tebibu Kebede

Outcome 7: Work successfully in a diverse, inclusive environment.

I met this outcome because...

As an international student from Ethiopia, I have had the privilege of working in a truly diverse and inclusive environment during my time in the computer science program. The evidence of my ability to work successfully in such an environment can be seen in several aspects of my academic and extracurricular experiences.

The evidence is...

1. Collaborative Team Projects: One of the key indicators of my ability to work in a diverse environment is my participation in collaborative team projects. For instance, in the Better Business Bureau (BBB) project, I worked alongside fellow students who came from different cultural backgrounds. This project required effective teamwork, where we leveraged our unique perspectives to solve complex problems. It's important to note that my team consisted of international students like me, with one student from Ivory Coast as well as students from Denver and Minnesota. This diversity allowed us to approach challenges from various angles and enriched our problem-solving capabilities.
2. Inclusive Extracurricular Activities: Outside of the classroom, I actively engage in extracurricular activities that promote diversity and inclusivity. I have been a part of clubs and organizations that celebrate different cultures and foster a sense of belonging for all students, regardless of their background. Through events and initiatives organized by these groups, I have been able to connect with students from all over the world and appreciate the value of diversity.

This evidence proves my assertion because...

Working with a diverse group of students on the BBB project has exposed me to different perspectives and problem-solving techniques. It has made me more adaptable and open-minded, enabling me to collaborate effectively with colleagues from various backgrounds. My involvement in extracurricular activities further demonstrates my commitment to creating an inclusive environment where everyone feels valued and respected.

In conclusion, my experiences as an international student in the Computer Science program, particularly my participation in the BBB project and involvement in extracurricular activities, serve as strong evidence of my ability to work successfully in a diverse, inclusive environment. These experiences have not only enriched my own learning but have also contributed to the diversity and inclusivity of the broader academic community.

Notes for future work to better meet this outcome: As I continue my academic journey, I plan to seek out additional opportunities to engage with diverse groups of students and contribute to creating an even more inclusive environment. This may include participating in multicultural events, volunteering for diversity-focused initiatives, and actively promoting cross-cultural understanding within the computer science community.
