Final output guess

The final output of the Better Business Bureau Data Management (BBBDM) system, typically saved in a CSV file, is likely to be a comprehensive dataset that includes both validated and unvalidated business records, complete with annotations regarding their validation status and sources. Here's what you might expect in the final output:

1. **Record Identifier**: Each row corresponds to a unique business record, often identified by a unique ID or combination of name and address.
2. **Business Information**: The core business details such as business name, address, phone number, email, and website URL.
3. **Validation Flags**: Fields indicating whether the record has been validated (e.g., `isValid`, `isVerified`), with boolean values or confidence scores.
4. **Source Annotations**: For each piece of information, there might be an associated source field indicating where the validation came from (e.g., `nameSource`, `addressSource`), with values like `SOS`, `GoogleAPI`, `YellowPages`, or `Manual`.
5. **Confidence Scores**: Where machine learning or probabilistic checks are used, a confidence score may accompany each validation flag, indicating the level of certainty in the validation (e.g., `nameConfidenceScore`).
6. **Invalid Data Reasons**: For records or fields marked as invalid, there could be an explanation field detailing why they were considered invalid (e.g., `invalidReason`).
7. **Date Stamps**: Timestamps indicating when the record was last updated or validated.
8. **Manual Review Flags**: Indicators for records that require manual review or further investigation.
9. **Additional Metadata**: Any additional information that might be useful for downstream processing or auditing, such as the number of times a record has been queried or updated.

Here's a simplified illustration of what the CSV file might contain:

ID	BusinessName	Address	Phone	Email	Website	NameValidated	AddressValidated	PhoneValidated	EmailValidated	WebsiteValidated	Source
1	Acme Corp	123 Main St	+123456789 0	contact@acme.com	www.acme.com	True	True	True	False	True	SOS
2	Beta LLC	456 Side Ave	+0987 654321	info@beta.com	www.beta.com	True	False	True	True	True	Google
3	Gamma Inc	789 Circle Rd	Not Available	n/a	www.gamma.org	False	True	False	False	True	YP

The fields and structure of the output file will be tailored to the specific needs of the BBB and the capabilities of the system. The output format should be clearly documented so that users can understand and utilize the data effectively.
